

Ricardo M. Martins

Global Account Manager, Developer Relations

Connecting **developers, product** teams, and **AI infrastructure**
to turn **strategic** partnerships into production **impact**

A career built at the intersection of technology, customers, and product impact

23+ Years

Technology & Infrastructure

From ISPs and media platforms to global cloud and technology companies

14+ Years

Public Cloud & AI Platforms

Designing, automating, and operating reliable cloud systems across AWS, Azure, and hybrid environments.

10+ Years

Customer-facing Technical Leadership

Advising enterprise customers, partners, developers, and executives as an architect, trainer, customer engineer and solutions engineer.

6+ Years

Product, Partner & Developer Ecosystems

Translating customer requirements and field insights into product priorities, enablement, documentation, and adoption.

Career Journey: From Infrastructure to AI Platforms

Apr/2024 – Present

Principal Cloud & AI Solutions Engineer - Microsoft

Leading cloud and AI infrastructure engagements with digital-native customers; guiding adoption of Azure OpenAI, GPU-based workloads, Kubernetes, and hybrid scaling architectures that connect cloud infrastructure with AI performance at scale.

Jan/2023 – Mar 2024

Senior Managed OpenShift Black Belt - Red Hat

Specialized in container platforms, performance tuning, and customer enablement on ARO and hybrid Kubernetes architectures.

Dec/2015 – Jan/2023

Cloud Solutions Architect, Azure Technical Trainer, and Senior Infrastructure Customer Engineer – Microsoft

Began as a Cloud Solutions Architect in Brazil, helping enterprises modernize and migrate to Azure. Later relocated to the U.S., where I held two roles, first as an Azure Technical Trainer delivering global enablement programs, and then as a Customer Engineer within the FastTrack for Azure team, driving customer success, reliability improvements, and product feedback integration.

Apr/2003 – Dec 2015

Site Reliability & Systems Engineering Roles - Bemobi, Globo.com, Equinix Datacenters, Groupon Brazil, and others.

Built a solid foundation across Linux, networking, and reliability engineering, experience that continues to influence my architectural approach to modern cloud and AI infrastructure.

*Consulting &
Entrepreneurial Work*

Nov/2013 – Dec 2015

Co-Founder, Cloud Architect & SRE - Storme, Zoop Payments, Rimu Hosting, Jobzi, ResolveAI

Co-founded Storme, a cloud company specializing in migrating Magento and WordPress workloads to AWS. Supported startups such as Zoop Payments with architecture design, reliability engineering, and multi-region deployments. Provided infrastructure consulting for early-stage SaaS companies, helping them adopt cloud practices and automation during Brazil's first wave of public cloud transformation.

Joined **Microsoft** in **2015** to help customers adopt **Azure** during **its early growth phase**.

Moved to **Red Hat** in **2023** to deepen hands-on experience with **OpenShift** and the **open-source** ecosystem.

Returned to **Microsoft** in **2024** to focus on **AI infrastructure, GPU workloads**, and hybrid scalability.

Now exploring **NVIDIA** as the natural next step, where **cloud and AI infrastructure converge**.

How I create impact

Technical-to-Business Translation: Turning complex cloud, AI, infrastructure, and reliability topics into **clear decisions** and **value propositions for developers, architects, and executives**.

Customer & Partner Leadership: Building **trusted-advisor relationships**, leading architecture reviews, managing escalations, and aligning stakeholders around **measurable outcomes**.

Product & Ecosystem Influence: Converting recurring **customer needs** and **field signals** into **actionable feedback** for engineering, product, and partner teams.

Developer Enablement & Scale: Creating **training, documentation, tools, and communities** that make technical **adoption repeatable** beyond a single customer engagement.

Qualifications & Technical Foundation

Cross-certified across cloud, open-source, Kubernetes, and AI infrastructure ecosystems.

Cloud Experience: With **14+ years of experience** in cloud architecture, migrations, reliability, and technical pre-sales, I have helped organizations modernize infrastructure and build scalable environments across Azure, AWS, and hybrid ecosystems.

Technical Foundation: My background combines Linux, networking, automation, containers, Kubernetes, CI/CD, and open-source platforms. This foundation helps me **connect traditional infrastructure** with **modern AI and accelerated-computing workloads**.

Certifications: Certifications across **NVIDIA, Azure, Red Hat, Kubernetes, Linux, and AWS** validate my continued investment in cloud-native platforms, automation, security, networking, and AI infrastructure fundamentals.

Cross-Functional Impact & Developer Enablement

Turning field experience into reusable knowledge, product feedback, and developer adoption.

Official & Cross-Functional Contributions

- Microsoft Learn Modules, reference architectures, and technical documentation
- Linux Hackathon incorporated into Microsoft's official **What The Hack** program
- Red Hat Cloud Experts contributions, including **ARO with NVIDIA GPU workloads**
- Customer feedback translated into product, engineering, and enablement improvements
- Technical mentorship for Microsoft engineers, and architects

Independent Developer Ecosystem

- **AI for Infra:** 220+ page handbook for infrastructure professionals entering the AI era
- **AKS Learning and K8s Hackathon:** Hands-on Kubernetes learning and practice
- **Azure Cert Prep:** 205 hands-on challenges across five Microsoft certifications
- **PTU Calculator:** Practical Azure OpenAI capacity-planning and pricing tool
- **Activity Log:** curated catalog of projects, publications, and community work

<https://github.com/ricmmartins/activitylog/>

Developer Reach & Engagement

- **27K+ sessions** across public tools and learning resources in the last 365 days
- **3.4K+ LinkedIn Subscribers** to the AKS Newsletter
- **265K+ cumulative views** across eight Microsoft Community Hub articles

Trusted by Customers & Cross-Functional Teams

Selected excerpts from professional feedback on technical expertise, collaboration, and developer enablement.

Technical Clarity

*"One thing you do exceptionally well is your ability to **simplify complex technical concepts**. Your technical guidance has been a great **unblocker for me while helping the customers** especially in AKS and other infrastructure conversations. Your willingness to assist myself in understanding the technical intricacies has significantly **improved my efficiency and problem-solving capabilities**. [...] It's impressive how you manage to gather customer requirements and **foresee technical challenges and address them with effective solutions**."*

Ahmed C. (Senior Solutions Engineer)

Cross-Team Collaboration

*"Ricardo, you are **always going above and beyond**, effectively and efficiently working with **customers and partners to surpass our targets**. This is clearly demonstrated by the **NPS/NSAT results** of all projects we are working on together. You always **build great rapport with all different teams** and it shows. Most of our stakeholders **ask to have you as part of the project**."*

Ana R. (Principal Program Manager)

Customer Commitment

*When I reached out to you for guidance on a customer issue, you **helped me without hesitating even though you are not specifically aligned to my account**. It's important that we all work this way so that we can bring our best to our customers.*

Chris S. (Strategic Account Director)

Developer Enablement

*"I would like to commend Ricardo Martins for his exceptional work around AKS, both **internally and within the external Microsoft community**. [...] I asked Ricardo last week for recommendations on AKS backup. Despite not having any ready recommendations, he **wrote an entire script in less than a day** [...] he also **wrote a blog post sharing the script with the wider community**. These initiatives are not only impacting and improving our customers, but they are also establishing Ricardo as **one of the top AKS specialists known outside Microsoft**."*

Leandro C. (Cloud Solutions Architect)

Customer Trust & Strategic Planning

*"he's been an incredible partner in **helping us expand our services to Azure alongside AWS and GCP**. He's been a huge help with **roadmap planning, network connectivity, centralized logging, and IAM**. Ricardo is super knowledgeable, responsive, and easy to work with, which has made the entire process so smooth for us. He goes **above and beyond** to make himself available and is **extremely responsive**."*

Kris P. (Staff SRE - Customer)

Mentorship & Team Development

*"Ricardo is an outstanding professional and colleague. [...] Now that I've had the chance to work with him, I can confirm that **everything I heard was true**. He goes **above and beyond to help others** and brings an **immense technical background to share**. I am both happy and proud that he accepted the challenge of **being my mentor at Microsoft**."*

Igor A. (Cloud Solution Architect)

Recognized for Strategic Account Impact

Leadership feedback on customer execution, business outcomes, and cross-team collaboration

Ahmed H. (Sr. Director Solutions Specialist)

"I'd like to recognize Ricardo for his **exceptional impact across our territory in a very short period**. He consistently leans in, even when the work is new or challenging, and has **built meaningful credibility with some of our most sophisticated customers**. His engagement is tangibly advancing relationships and accelerating our ACR growth."

Immediate Impact (Customer Wins)

- Ricardo became a **trusted advisor on complex AOAI topics**, coordinating late-night cross-geo syncs with PG to guide the rollout of Response API.
- Led strategic security dialogues that expanded their security footprint and strengthened the roadmap for next-phase adoption.
- Navigated **capacity constraints with creative solutions** (e.g., multi-region vs. zonal deployment patterns) and accelerated onboarding through capacity reservation previews and **clear deployment guidance — unblocking progress and protecting revenue timelines**.

Revenue Impact

- Response API work secured **~\$3M in ACR** and established a **repeatable pattern** now being applied to other accounts.
- The momentum he's created is directly fueling adoption as we shift focus to next-generation GPT models, **expanding opportunity across the portfolio**.

Long-Term, Scalable Value

- **Credibility & Reuse:** Ricardo's implementation learnings for Response API informed our own engineering approach and are now **enabling rollouts with other worldwide customers** — turning a single win into a **scalable playbook**.
- **Territory Coverage:** Acting as my backup, Ricardo has stepped deeper into account-management activities, developing a **broad, end-to-end view of the territory** and sharing practical guidance that uplifts the wider team.
- **Operating Rhythm:** His **bias for action**, cross-time-zone **collaboration with PG**, and clear documentation of deployment patterns are **raising our bar for execution and knowledge reuse**.

Ricardo is delivering **immediate results, unlocking measurable revenue, and creating durable assets that scale across customers and regions**.

First 90 days: Align priorities, prove value, enable scale

An initial approach refined with account team and Microsoft Stakeholders

Days 1–30 · Discover & Align	Days 31–60 · Validate & Execute	Days 61–90 · Demonstrate & Expand
Map Microsoft product priorities, existing integrations, and key stakeholders.	Align owners, engineering resources, and success criteria for one priority pilot.	Review pilot evidence and agree on a production path—or a clear stop decision.
Understand NVIDIA account commitments, technical blockers, and developer feedback.	Coordinate NVIDIA and Microsoft teams to evaluate integration and resolve blockers.	Package validated learnings into reusable integration guidance and developer enablement.
Prioritize 1–2 opportunities based on partner value, feasibility, and NVIDIA differentiation.	Measure against the current baseline: performance, cost, quality, and developer effort.	Establish the next-quarter technical roadmap and align GTM around demonstrated value.
Outcome: Jointly agreed technical priorities.	Outcome: Pilot underway with measurable criteria.	Outcome: Evidence-based decision and scale plan.

Success means partner-owned adoption and measurable workload improvement, not simply more meetings or demos.

What I would bring to NVIDIA

Microsoft ecosystem experience, hands-on technical depth, and a track record of helping customers and developers move forward. I would bring that experience to advancing NVIDIA software **integration and adoption** across Microsoft's platforms.
